EDUCATION

Guru Tegh Bahadur Institute of Technology **New Delhi, India**

Bachelors in Technology in AI and ML December 2021, July 2025(Expected)

- GPA: 9.305/10
- Relevant coursework: Foundation of Data Science, Fundamentals of Machine Learning, Principles of Artificial Intelligence, Database Management System, Fundamentals of Deep Learning, Advances in Deep Learning, Natural Language Processing.

Pragati Public School **New Delhi, India**

Class – XII (CBSE) 2020-2021

- Overall 92% in English core, Mathematics, Physics, Chemistry, Computer Science

WORK EXPERIENCE

Quality Analyst Intern, LYBL Healthcare August 2024

- Executed comprehensive manual tests to ensure the functionality, usability, and visual consistency of web and mobile applications, identifying critical bugs and performance issues in various user flows.
- Developed detailed test cases and scenarios based on business requirements and technical documentation, validating features such as consultation booking, diet plan redesign, and user rating systems.
- Worked closely with development and product teams to report, track, and prioritize bugs, contributing to continuous improvement through regression testing and post-release verification.

PROJECT EXPERIENCE

Smoking Object Detection April 2024 - May 2024

- Developed an object detection model to identify and determine whether a person is smoking or not in images and video feeds utilizing YOLOv5 (You Only Look Once version 5), a cutting-edge object detection architecture known for its speed and accuracy.
- Collected a diverse set of images and videos featuring individuals smoking and not smoking to create a custom dataset and manual labelling them.
- Evaluated the model using metrics such as precision, recall, mean Average Precision and accuracy achieving an accuracy of approximately 80%, indicating effective detection of smoking behavior in images and videos.

Document Summarization May 2024

- Developed a Streamlit application for querying PDF content using Google Generative AI and FAISS.
- Extracted text from PDFs with PyPDF2 and implemented efficient text chunking.
- Configured Google Generative AI embeddings for vector representation and similarity search.
- Created a custom question-answering chain to provide accurate answers based on PDF content.
- Designed a user-friendly interface for uploading, processing, and querying PDFs.

SKILL AND INTERESTS

- Technical Skills: Python, Java, Machine Learning, Data Visualization, Feature Extraction, Natural Language Processing, Keras, Deep Learning

  Certifications: Internshala Data Science Training, Udemy Machine Learning A-Z
