Summary

As a recent graduate, I am seeking a role that allows me to continue learning and perfecting my skills while providing high-quality work and flourish as a Data Scientist.

Experience

Data Analytics and Job Simulation *Oct 2023-Nov 2023*

Accenture

- Analysed data and performed job simulation tasks
- Responsible for Project Understanding, Data Cleaning & Modelling, Data Visualization, and storytelling
- Presented analytical insights to the client.

Intern, Machine Learning and Data Science *Sept 2023-Oct 2023*

YBI Foundation

- Worked on projects such as handwritten digit prediction and big sales prediction
- Gained experience in data science techniques and machine learning models.

Intern, Artificial Intelligence and Machine Learning Aug 2023-Sept 2023

Cod Soft

- Developed a Movie Recommendation System, Image Captioning, and Tic-Tac-Toe projects
- Applied AI and ML techniques in real-world projects.

Skills

- Python
- programming in C
- HTML, CSS
- Data Structures.
- Machine Learning
- Deep Learning
- Natural Language Processing
- Data Analytics
- Matplotlib
- Power BI
- MySQL
- Proficiency in handling Microsoft excel, word and PowerPoint

Education

Guru Tegh Bahadur Institute Of Technology, New Delhi, DL 2025

- **Bachler of Technology**
- **GPA: 8.325**

12th (CBSE), Gurgaon, HR 2021

- **Delhi Public School Ghaziabad (77%)**

10th (CBSE), Gurgaon, HR 2019

- **Delhi Public School Ghaziabad (75%)**

Projects

- **Movie Recommendation System**

The Content-Based Movie Recommender System uses content-based filtering, which involves matching movies based on their attributes and features. By understanding the characteristics of movies you like, it suggests similar movies that align with your taste. I have also used bootstrap for better Interface.

- **Image-Captioning**

Image captioning is a technology that involves generating descriptive and coherent textual captions for images using machine learning techniques, typically employing a combination of computer vision and natural language processing (NLP) algorithms. The goal of image captioning is to enable computers to understand the content of an image and express it in human-like language.

- **Big Sales Prediction using ML**

Designed and implemented a sales prediction model using Random Forest in Scikit-learn, achieving accurate sales forecasts to optimize inventory management. Leveraged Seaborn and Matplotlib for comprehensive data visualization and trend analysis, aiding strategic decision-making and operational efficiency.
