Aditya Gupta

adguptawork@gmail.com linkedin.com/in/aditya-gupta-0b2976270 · github.com/GuptaAditya1

Technical Skills

- **Coding Language** : Python(Tensorflow, Keras,scikit-learn, pandas, numpy, matplotlib, NLTK)
- **Databases**: SQL(PostgreSQL, MySQL)
- **DevOps & Tools**: Git, GitHub
- **Concepts:** Natural Language Processing, Deep Learning, Classification, Regression, Clustering
- **BI Tools:** Power BI, Excel

Experience

ISSA- DRDO, MINISTRY OF DEFENCE — August 2024-October 2024

Artificial Intelligence & API Intern

Tech Stack: Faiss, REST API, FLASK

- Fine tuned Large Language Models
- Created a chatbot that used RAG to give accurate answers.
- Creating API to connect AI model to Spring Application.

DESIDOC- DRDO, MINISTRY OF DEFENCE — July 2023-September 2023

Machine learning Intern

Tech Stack: Python(Tensorflow, Keras, pandas, numpy)

- Analyzed five innovative machine learning algorithms to determine the optimal approach for large dataset processing; implemented dimensionality reduction techniques that improved model accuracy, leading to a more reliable and efficient predictive analysis framework. Removed 90% of useless features in a high dimensional dataset.
- Achieved project goals within timelines and budget, affirming 100% satisfaction and positive feedback.
- Classified spam and not-spam mails with 73% accuracy.

Projects

Transaction Fraud detection using LSTM| [Github] — June 2024-July 2024

Tech Stack: Python(Tensorflow, scikit-learn, Keras, pandas, numpy)

- Developed models achieving over 92% accuracy, demonstrating exceptional performance in precise prediction and classification tasks.
- Boosted model performance by 44% through the application of effective class balancing techniques, significantly improving predictive accuracy and model robustness.
- Mitigated overfitting by implementing dropout techniques, ensuring better generalization and reliability of the models.
- Executed an extensive hyperparameter tuning process that fine-tuned machine learning model parameters, resulting in a 27% reduction in processing time, significantly enhancing overall predictive performance and operational efficiency.

Review Classification using NLP | [Github] — March 2024-April 2024

- Developed and optimized a review classification model that achieved 87% accuracy, demonstrating robust performance in accurately categorizing textual data.
- Boosted model efficiency by 20% through advanced preprocessing techniques and algorithm fine-tuning, resulting in faster and more reliable predictions.
- Expanded the model's general applicability by 43% by integrating and testing diverse datasets, ensuring its effectiveness across various domains and types of reviews.

Dimensionality Reduction for Identification of Spam Email | [Github] — July 2023-September 2023

- Achieved F1 score higher than 72%.
- Spearheaded the optimization of predictive models through advanced dimensionality reduction methods, leading to a 30% increase in performance metrics and significantly improving project delivery time across multiple research initiatives.
- Evaluated the effectiveness of three advanced Dimensionality Reduction Techniques, resulting in revised data visualization capabilities that enabled the identification of key trends across 1M+ data points, streamlining decision-making processes.
- Crafted a model which decreased overfitting by 80%.

Education

Guru Tegh Bahadur Institute of Technology, New Delhi, India — 2021-present

B.Tech : Artificial Intelligence & Machine Learning

CGPA of Latest Semester- 8.61

Certification

- **HACKERRANK -** PYTHON 4 STAR

Soft Skills

- Innovated solutions and collaborated with cross-functional teams during group projects
