EDUCATION

Guru Gobind Singh Indraprastha University Oct 2022 – Aug 2025
B.Tech in Artificial Intelligence and Data Science *Delhi, IN*

Ambedkar Institute of Technology Aug 2019 – Jun 2022
Diploma in Information Technology *Delhi, IN*

EXPERIENCE

Data Analyst Apr 2024 – Mar 2025
Jagtereho Fashcom India Pvt. Ltd. *Delhi, IN*

- Conducted comprehensive analysis on consumer trends and behavior patterns; findings revealed critical insights that enhanced marketing efficiency by 15%, fostering a notable growth of 10% in attracting new customers.
- Analyzed sales data to identify cost-saving opportunities, resulting in a 20% reduction in operational expenses.

Data Science Intern Jul 2018 – Aug 2024
Bharat Intern *Delhi, IN*

- Enhanced a robust Convolutional Neural Network (CNN) model for classifying cats and dogs, enhancing image recognition accuracy by 15%.
- Conducted thorough data preprocessing and augmentation to improve model performance, reducing overfitting and boosting overall efficiency.
- Collaborated with a team to deploy machine learning models, optimizing classification workflows and delivering results within project timelines.

Data Science Intern Sep 2023 – Oct 2023
CodSoft *Delhi, IN*

- Expanded a *predictive model* using Python for tasks such as Titanic survival prediction, Iris flower classification, and sales forecasting, resulting in a 95% accuracy rate and showcasing strong analytical and programming skills.
- Formulated an advanced predictive model that improved customer churn prediction by 20%, resulting in increased customer retention and revenue.
- Analyzed customer behavior using SQL and Python, uncovering key insights and recommending targeted marketing strategies, resulting in 15% increase in sales.

Data Science Intern Jan 2022 – Apr 2022
Tech Mahindra Foundation *Delhi, IN*

- Spearheaded the development and implementation of multiple machine learning models for diverse projects, optimizing predictive accuracy by 15%.
- Optimized data analysis process by implementing advanced statistical techniques resulting in 20% faster insights and enhanced decision-making.
- Maximized team's data analysis capabilities by refining data preprocessing, model selection, and evaluation processes, resulting in a 25% improvement in efficiency and facilitating a 30% increase in knowledge transfer.

PUBLICATIONS

Exploring the Potential of Arduino and Ultrasonic Sensor Integration in Radar Systems May 2024
International Research Journal on Advanced Engineering Hub (IRJAEH)

- Radar, short for Radio Detection and Ranging, uses radio waves to measure the distance, direction, and radial velocity of objects. It finds applications in aviation, maritime, space exploration, defence, meteorology, and mapping.
- This novel radar system replaces traditional radio waves with ultrasonic signals, leveraging an Arduino board connected to a servo motor to move a sensor for object detection within a specific range.
- The Arduino IDE simplifies programming, while the Processing IDE enhances visualization with a user interface, enabling effective object detection and visualization for applications like security and navigation.

PROJECTS

Smart Scout: *Your AI Shopping Assistant* | *Python, Selenium, Beautifulsoup, Streamlit, Langchain, Ollama*

- Developed an AI-powered chatbot, leveraging Selenium and BeautifulSoup for real-time web scraping to extract product specifications from e-commerce platforms.
- Integrated advanced AI models (LangChain with Ollama 3.1) to deliver contextual and accurate responses, simulating a virtual product salesman for user queries.
- Engineered a modular architecture using Python and Streamlit, enabling seamless user interaction, efficient data processing.

SMS/Email Spam Detection | *Python, NLP, Machine Learning*

- Improved a machine learning model for SMS/email spam detection, leveraging techniques such as natural language processing (NLP) and classification algorithms to identify and filter spam messages effectively.
- Implemented data preprocessing and feature extraction methods to enhance model accuracy, including text normalization, tokenization, and vectorization.
- Evaluated model performance using metrics such as precision, recall, and F1 score, and fine-tuned parameters to improve detection rates and minimize false positives.

Myntra Fashion Sales Analysis | *Power BI, Advance Excel*

- Created a detailed Power BI dashboard to visualize Myntra's fashion product sales, delivering clear insights into key metrics such as customer demographics and purchasing behaviors for over 1,000 unique products.
- Utilized advanced Power BI features like DAX and calculated columns to create dynamic reports, enabling real-time tracking of sales and profitability across various product categories.
- Integrated multiple data sources to analyze sales patterns, improve inventory management, and support data-driven decision-making for marketing and merchandising strategies.

TECHNICAL SKILLS

Languages: Python, SQL, C/C++, HTML/CSS
Developer Tools: Microsoft Excel, Power BI, Jupyter Notebook, Kaggle, Git
Libraries: NumPy, Pandas, Seaborn, TensorFlow, Matplotlib, Keras
