Education

Guru Gobind Singh Indraprastha University **2021 – 2025**
Bachelor of Technology in Artificial Intelligence and Data Science (CGPA: 9.208) *New Delhi, India*

Aravali International School **2020 – 2021**
Class 12th (CBSE Score: 94.8%) *Haryana, India*

Aravali International School **2018 – 2019**
Class 10th (CBSE Score: 96.6%) *Haryana, India*

Projects

Attrition Analytics Dashboard — *PowerBI, Excel, DAX*
- Developed an interactive Power BI dashboard to analyze employee attrition trends across job roles, age groups, education levels, and salary ranges, leveraging a dataset of 1,470 employees.
- Identified key insights such as high attrition among laboratory technicians and employees aged 26–35, using advanced visualizations and DAX functions for actionable decision-making.

Customer Segmentation — *Python, Matplotlib, Seaborn, Scikit-learn*
- Performed customer segmentation using K-Means clustering to categorize 200 mall customers based on age, annual income and spending score, identifying high-value target groups for targeted marketing strategies.
- Conducted comprehensive data preprocessing and exploratory data analysis (EDA) on customer demographic and spending data to uncover insights and trends for informed business decision making.

Customer Churn Analysis — *Python, Pandas, Seaborn, Matplotlib, Scikit-learn*
- Conducted an in-depth customer churn analysis, identifying key factors contributing to churn, such as high churn rates in the SME division and yearly consumption and net margin as the top drivers of churn.
- Utilized Python, Pandas and NumPy for data preprocessing and analysis, followed by optimizing a random forest model that achieved an 85% accuracy in predicting customer churn.
- Delivered data-driven insights through a comprehensive executive summary, recommending a 20% discount for target customers to reduce churn, and visualized trends using data visualization tools for better stakeholder understanding.

Fruits and Vegetables Image Classifier — *Python, Numpy, Matplotlib, TensorFlow*
- Developed a fruit and vegetable image recognition system using Convolutional Neural Networks (CNN), achieving high accuracy in multi-class classification tasks.
- Implemented advanced deep learning techniques with TensorFlow/Keras, optimizing the model with Adam optimizer and categorical crossentropy loss.
- Preprocessed datasets with efficient pipelines, enabling seamless training, validation and testing of a scalable model adaptable to new categories.

Skills

- **Languages:** C, C++, Python
- **Databases:** SQL
- **Libraries:** Numpy, Pandas, Scikit-learn, TensorFlow, Keras
- **Tools:** PowerBI, Excel, Jupyter Notebook, Git, Kaggle
- **CS Fundamentals:** OOPS, Data Structure and Algorithms
- **Core Skills:** Data Analysis Visualization, Data Cleaning Preprocessing, Feature Engineering , Machine Learning

Certifications

- **Python for Data Science and Machine Learning Bootcamp:** Completed an extensive course covering Python programming, data science, and machine learning concepts on Udemy. Developed proficiency in handling numerical data, creating visualizations, and implementing machine learning algorithms.
- **Basic to Advanced PowerBI and Microsoft Excel:** Completed comprehensive courses on PowerBI and Excel, focusing on creating dashboards, advanced formulae, Pivot Tables, chart creation, and data analysis techniques.
- **The Complete SQL Bootcamp:** Completed a comprehensive course on SQL with a focus on PostgreSQL on Udemy, covering both basic and advanced concepts.
